## ***General Information***

---

The Master of Public Health (MPH)

**SPPH 5307: Introduction to Epidemiology**

This course will introduce students to the fundamental principles of epidemiology. Students will be introduced to quantitative data collection methods as well as being taught how to interpret results of data analysis for public health research, policy, or practice. Ultimately, this course will equip students with the necessary information to apply epidemiological methods to the breadth of settings and situations in public health practice.

**SPPH 5310: Public Health Policy**

This course presents competencies surrounding public health policy formulation. The main focus will be on the policy issues in the U.S. health care system, but some global health will be explored. The course will include application of principles of policy formulation, development budgeting, implementation, evaluation and analysis. An historical overview of seminal health policy events in U.S. history is also explored through competing stakeholder dynamics. (

**SPPH 5311: Introduction to Biostatistics**

This course will introduce students to basic biostatistics as used in public health practice. Through the utilization of SPSS software, students will learn to interpret their statistical analysis result

**SPPH 5337: The U.S. Healthcare System**

This course provides an overview of healthcare in the United States. The historical context as well as trends that could impact the healthcare system is presented. Several aspects of health care systems and services are explored

**SPPH 5350: Public Health Ethics and Law**

This course will address topics intended to introduce students to key concepts of law and ethics as applied to public health. It seeks to demonstrate, with both current and historical examples, constraints in public health decision making and actions. This course will help students identify and appropriately assess legal and ethical issues that underlie the field of public health.

communication strategies; and engagement of rural and urban communities using theory-informed models.

**SPPH 5314: Planning and Developing Health Promotion Interventions**

This course will take the student through the process of intervention development, beginning with the assessment needed to understand determinants of health and behavior through the mapping of determinants, development of strategies and methods, and preparing for evaluation. Students will work in small groups on a complex public health problem and will develop an intervention to address that problem.

**SPPH 5321: Program Evaluation**

Students will learn the basics of public health program evaluation. Combining the CDC Framework for Program Evaluation with theory-based evaluation principles, students will learn how to engage stakeholders, describe public health programs, design evaluations, gather credible evidence, and justify conclusions to ensure maximum use of evaluation findings for program stakeholders and evidence-based public health programming.

**SPPH 5327: Social Epidemiology**

This class focuses on social, behavioral, and environmental contributors to population health and well-being. This course will include analysis and discussion of the data, methods, and research ethics relevant to social epidemiology, and students will be expected to develop and refine population-based solutions to complex social and structural factors that impact population health. The course examines how structural biases and social inequality impact health at the local, national, and global level, and considers how issues of cultural competence are relevant to addressing health disparities.

**SPPH 5317: Health Communication**

**SPPH 5308: Advanced Epidemiology Methods**

This three-semester hour course will review selected articles from the epidemiologic and biostatistical literature that are of historical importance.

**SPPH 5309: Basic Environmental Health Sciences**

This course is an overview of the major areas of environmental health and provides students with an understanding of hazards in the environment, the effects of environmental contaminants on health, and various approaches to address major environmental health problems. Areas of emphasis are environmental epidemiology, toxicology, agents of environmental disease and policy and regulation.

**SPPH 5312: Intermediate Biostatistics**

The objective of this course is to expand upon the basic concepts of statistical reasoning developed in SPPH 5311 (Introduction to Biostatistics) to selected applications of biostatistical analysis: simple and multiple linear regression, contingency table analysis, logistic regression, and analysis of variance. The course also includes introductions to survival analysis, repeated measures data, and nonparametric methods.

**SPPH 5314: Planning and Development Health Promotion Interventions**

This course will take the student through the process of intervention development, beginning with the assessment needed to understand determinants of health and behavior through the mapping of determinants, development of strategies and methods, and preparing for evaluation. Students will work in small groups on a complex public health problem and will develop an intervention to address that problem.

**SPPH 5316: Responsible Conduct of Research and Communication in Public Health**

This course applies an active, participatory approach to help public health and health care professionals learn about the regulatory environment as well as the norma12 0 612 7(ee)4(thi)-3(c)4(p publi)-3(c)

**SPPH 5321: Program Evaluation**

Students will learn the basics of public health program evaluation. Combining the CDC Framework for Program Evaluation with theory-

complications of pregnancy, infections in pregnancy, maternal mortality, adverse pregnancy outcomes, and birth defects. The course focuses on methodological issues in studying reproductive and perinatal outcomes using epidemiologic study designs, while incorporating life course and global health perspectives.

**SPPH 5336: Digital Health: Foundation and Applications**

This class will explore the use of digital health technologies as they are currently being used in the field of public health. Class will include discussions of innovative public health programming ideas, and evidence-based practices using digital health technologies.

**SPPH 5337: The U.S. Healthcare System**

This course provides an overview of healthcare in the United States. The historical context as well as trends that could impact the healthcare system is presented. Several aspects of health care systems and services are explored.

**SPPH 5340: Data Management and Analysis for the Health Sciences.**

related to public health design, data management, and data analysis using SPSS and SAS software packages.

**SPPH 5341: Applied Statistics for Epidemiology and Health Sciences**

This course is designed for students who seek to develop statistical reasoning in epidemiology, as well as skills in data analysis, interpretation, and presentation. This course places special emphasis on applied statistics and modeling techniques. Common statistical models for continuous, categorical and count data from both cross-sectional and longitudinal studies will be implemented. During this course, students will discuss advanced epidemiologic methods issues that one may encounter during data analysis with guidance from the course director. Theoretical principles will be demonstrated with real world examples from biomedical studies. This course requires substantial statistical computing in software packages SPSS and/or SAS.R: some familiarity with one of these packages is recommended but not required. (F, O, H, IVC)

important political instrument allowing communities and regions to tell their stories  
(Geo)graphically representing data social and environmental d

simple programming language, is extremely useful in terms of GIS since many  
(or most) of the different GIS Software packages (such as ArcGIS, QGIS, PostGIS etc.) provide  
an interface to do analysis using Py

## *Schedule of core and required courses*

The following table shows the semesters in which the core and required courses are offered. All courses in the summer semester are offered only online. Most courses in the fall and spring semesters are offered concurrently in face-to-face and online formats.

<b>Summer</b>	<b>Fall</b>	<b>Spring</b>
SPPH 5313: Introduction to Public Health *	SPPH 5304: Social & Behavioral Sciences	SPPH 5307: Introduction to Epidemiology
SPPH 5304: Social & Behavioral Sciences	SPPH 5311: Introduction to Biostatistics	SPPH 5310: Public Health Policy
SPPH 5310: Public Health Policy	SPPH 5313: Introduction to Public Health	SPPH 5314: Planning and Developing Health Promotion Interventions
SPPH 5311: Introduction to Biostatistics	SPPH 5315: Organizational Leadership and Management	SPPH 5318: Health Promotion and Communication Seminar
SPPH 5334: Community Based Methods and	SPPH 5316: RCR & Communication in Public Health	SPPH 5327: Social Epidemiology
SPPH 5337: US Healthcare system	SPPH 5317: Health Communication	SPPH 5337: US Healthcare system
SPPH 5307: Introduction to Epidemiology	SPPH 5321: Program Evaluation	SPPH 5334: Community Based Methods and Practice
